Keypads with customized design

We customize keypads to suit the wishes of our customers.

We design everything in 3D-Cad and are able to supply both 3D models and 2D drawings depending on what customers require.

We design and draw everything, such as plastic, sheet metal, printed circuit boards, cabling and assemblies. Below are a couple of samples of custom keypads from Excidor AB:

ExciPad 2003 EcoLog

Right keypad for forwarder at EcoLog. Besides the mini lever, a display MDM, speed potentiometer, proportional crane tile, LED for warnings and additional machine functions are all built into the keypad.

ExciPad ICL EcoLog

Keypad for harvesters at EcoLog. A small, lightweight keypad which is secured in front of the lever. Simple, tidy design. Printed circuit boards lacquered and protected with silicone in order to withstand tough environments.
