

## Return instruction for hydraulic Valve:

If you wish to return this hydraulic valve to Excidor make sure to follow the instructions below:

Make sure to save critical package material delivered with this order so you could use it in an eventual return to Excidor.

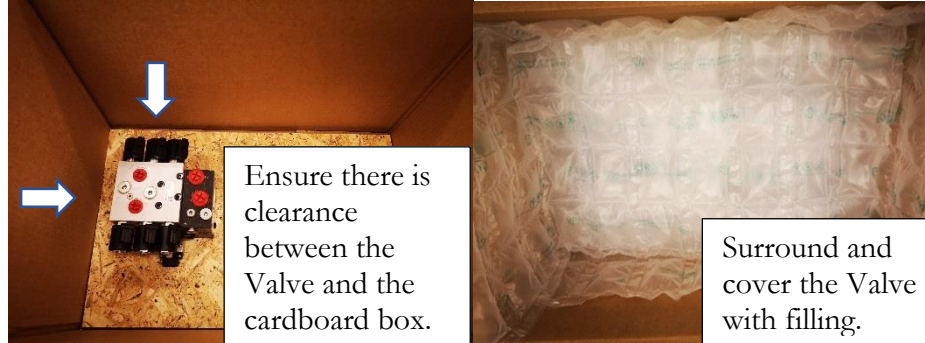

### Critical components are:

- **Wooden plate**
- **Protective cover**
- **Bolts (in some cases also washers and nuts)**
- **Cardboard box**
- **Bubble wrap filling**

When returning a Hydraulic Valve it must be mounted with the same bolts in the same manner as delivered, attached to the wooden plate, surrounded with bubble wrap filling and the protective cover placed on top.

Reuse the box or use a box with similar dimensions. **It's important that the wooden plate does not move around while under transport.**

If you are just returning the Valve you can cut the box in height to make the box more suitable.

**If packing requirements are not met your claim will be classified as void!**
